2022 National Survey on LGBTQ Youth Mental Health
Alaska
Executive Summary

The Trevor Project, the leading suicide prevention organization for LGBTQ young people, produces innovative original research that amplifies the experiences of diverse LGBTQ young people and brings new knowledge and clinical implications to the suicide prevention field.

Since 2019, our annual national surveys have been among the largest and most diverse surveys of LGBTQ young people in the U.S. For the first time ever, we’re publishing the findings of our national survey, which captured the experiences of nearly 34,000 LGBTQ people ages 13-24 across the United States in 2022, segmented by all 50 states.

These data provide critical insights into the suicide risk faced by LGBTQ young people, top barriers to mental health care, the prevalence of anti-LGBTQ victimization, and the negative impacts of recent politics. Importantly, this research also points to ways in which we can all support the LGBTQ young people in our lives by detailing per state LGBTQ young people’s access to accepting communities, LGBTQ-affirming spaces, and social support among family and friends — protective factors that are consistently associated with better mental health and lower suicide risk.

It’s essential to emphasize that because we still do not have known counts or registries of the LGBTQ youth population comprehensive data on the mental health and well-being of LGBTQ youth remains limited. These findings strive to underscore the unique challenges faced by young LGBTQ people, a group consistently found to be at significantly increased risk for suicide because of how they are mistreated and stigmatized in society.

We hope that LGBTQ young people in every state will see themselves reflected in these experiences that so many have bravely shared; and that these data will equip fellow researchers, policymakers, and other youth-serving organizations in every state with the data necessary to celebrate and uplift LGBTQ young people and advocate for policies that work to end the public health crisis of suicide.
Mental Health & Suicide Risk in Alaska

LGBTQ young people are not inherently prone to suicide risk because of their sexual orientation or gender identity, but rather placed at higher risk because of how they are mistreated and stigmatized in society.

### Suicide Risk
- **45%** of LGBTQ youth in Alaska seriously considered suicide in the past year.
- **12%** of LGBTQ youth in Alaska attempted suicide in the past year.

### Anxiety & Depression
- **72%** of LGBTQ youth in Alaska reported experiencing symptoms of anxiety.
- **62%** of LGBTQ youth in Alaska reported experiencing symptoms of depression.
64% of LGBTQ youth in Alaska who wanted mental health care in the past year were not able to get it.

LGBTQ youth who wanted mental health care but were unable to get it cited the following top five reasons:

- I was afraid to talk about my mental health concerns with someone else: 42%
- I did not want to have to get my parent's/caregiver’s permission: 40%
- I could not afford it: 36%
- I was afraid I wouldn’t be taken seriously: 32%
- I was afraid it wouldn’t work: 32%
Challenges Faced By LGBTQ Youth in Alaska

Research consistently finds that LGBTQ youth who have experienced anti-LGBTQ victimization — including being physically threatened or harmed, discriminated against, or subjected to conversion therapy — report significantly higher rates of attempting suicide.

Rates of LGBTQ youth who have been physically threatened or harmed

- Experienced threat or harm based on sexual orientation or gender identity: 37%
- Did not experience threat or harm based on sexual orientation or gender identity: 63%

Rates of LGBTQ youth who have experienced discrimination

- Experienced discrimination based on sexual orientation or gender identity: 66%
- Did not experience discrimination based on sexual orientation or gender identity: 34%

LGBTQ youth who reported being threatened with or subjected to conversion therapy

- Not subjected to or threatened with conversion therapy: 84%
- Threatened with conversion therapy: 9%
- Subjected to conversion therapy: 7%

LGBTQ youth who reported that recent politics negatively impacted their well-being:

- Never: 18%
- Sometimes: 44%
- A lot: 38%
Ways to Support LGBTQ Youth in Alaska

Research consistently finds that LGBTQ youth who live in accepting communities and feel high social support from family and friends report significantly lower rates of attempting suicide.

Access to affirming spaces among LGBTQ youth

- 33% of LGBTQ youth identified home as an LGBTQ-affirming space.
- 38% of LGBTQ youth identified school as an LGBTQ-affirming space.

Social support among LGBTQ youth

- 83% of family members provided high support.
- 17% of family members provided low to moderate support.
- 38% of friends provided high support.
- 62% of friends provided low to moderate support.

Rates of community acceptance of LGBTQ people among LGBTQ youth

- 9% of youth felt very accepting.
- 45% of youth felt somewhat accepting.
- 34% of youth felt somewhat unaccepting.
- 12% of youth felt very unaccepting.

What makes a space affirming for LGBTQ young people in Alaska?

- Other LGBTQ people that are active and happy in the space
- Pride flags
- Seeing adults ask for and respect people’s pronouns
- LGBTQ pride symbols
- Having other people like me
- Signs designating somewhere a safe space
- Resources for LGBTQ people
- Being open minded and understanding

- Asexual: 10%
- Questioning: 4%
The Trevor Project’s mission is to end suicide among LGBTQ young people.

We provide 24/7 crisis services for LGBTQ young people via a phone lifeline, text, and chat. We also operate innovative research, advocacy, public training, and peer support programs.

Methodology

A quantitative cross-sectional design was used to collect data through an online survey platform between September 20 and December 31, 2021. A sample of individuals ages 13 to 24 who resided in the United States was recruited via targeted ads on social media. No recruitment was conducted via The Trevor Project’s website or social media channels. Respondents were defined as being LGBTQ if they identified with a sexual orientation other than straight/heterosexual, a gender identity other than cisgender, or both. In order to ensure the representativeness of the sample, targeted recruitment was conducted to ensure adequate sample sizes with respect to geography, gender identity, and race/ethnicity. Qualified respondents completed a secure online questionnaire that included a maximum of 143 questions. Questions on considering and attempting suicide in the past year were taken from the Centers for Disease Control and Prevention’s Youth Risk Behavior Survey to allow for comparisons to their nationally representative sample. Please find a full methodology report at https://www.thetrevorproject.org/survey-2022/#methodology.
