Executive Summary

The Trevor Project is the leading suicide prevention and crisis intervention organization for LGBTQ+ young people. Trevor produces original research that amplifies the experiences of LGBTQ+ young people and adds new knowledge and clinical implications to the suicide prevention field. Since 2019, The Trevor Project has published some of the largest and most diverse surveys of LGBTQ+ young people in the United States, providing critical insights into the public health crisis of suicide among LGBTQ+ youth, as well as data-driven ways to address it.

This report utilizes the data collected through **The Trevor Project's 2024 U.S. National Survey on the Mental Health of LGBTQ+ Young People**, which captured the experiences of more than 18,000 LGBTQ+ young people ages 13-24 across the United States in 2024 – and segments it across all 50 states, Puerto Rico, and Washington, D.C.

State by state, this report offers a unique and detailed look at mental health and suicide risk, access to care, impacts of anti-LGBTQ+ victimization and policies, and methods of support for LGBTQ+ youth – as described by a national sample of LGBTQ+ young people themselves.

These findings underscore the unique challenges faced by LGBTQ+ young people, a group that is disproportionately impacted by suicide not because of who they are, but because of how they are mistreated and stigmatized in society.

We published this report to equip fellow researchers, policymakers, educators, and other youth-facing professionals and organizations with the data they need to protect and uplift LGBTQ+ young people in their communities – and to help end the public health crisis of suicide, once and for all.

We extend a heartfelt gratitude to all the LGBTQ+ young people who bravely shared their experiences with us, and we hope this research helps make your state a safer, healthier, and more inclusive place for you to call home.

Demographics in Georgia

Breakdown of Respondents' Demographics

Sample size: N = 541

The Trevor Project is the leading suicide prevention organization for lesbian, gay, bisexual, transgender, queer, and questioning (LGBTQ+) young people.

We provide 24/7 crisis services for LGBTQ+ young people via a phone lifeline, text, and chat. We also operate innovative research, advocacy, public training, and peer support programs.

Methodology

A quantitative cross-sectional design was used to collect data through an online survey platform between September 13 and December 16, 2023. A sample of individuals ages 13 to 24 who resided in the United States, including its territories, was recruited via targeted ads on social media. No recruitment was conducted via The Trevor Project's website or social media channels. Respondents were defined as being LGBTQ+ if they identified with a sexual orientation other than straight/heterosexual, a gender identity other than cisgender, or both. In order to ensure a diverse sample, targeted recruitment was conducted to ensure adequate sample sizes with respect to geography, gender identity, and race/ethnicity. Qualified respondents completed a secure online questionnaire that included a maximum of 134 questions. The questionnaire was offered in English and Spanish. Questions on considering and attempting suicide in the past year were taken from the Centers for Disease Control and Prevention's Youth Risk Behavior Survey to allow for comparisons to their nationally representative sample. Some donut charts may not add up to 100% due to rounding. Please find the complete methodology at: www.thetrevorproject.org/survey-2024/#methodology
